RPS/DPS 8000

High Accuracy Resonant Pressure Sensor

Since 1972, Druck has manufactured precision pressure sensors with a capability to meet critical applications in industrial, aerospace, oil and gas, and research environments. Today, Druck is part of GE Oil & Gas and has continually worked to develop and improve on the performance of our pressure sensors to meet our customers' requirements.

The RPS/DPS 8000 is the first product to incorporate the exciting new TERPS technology. TERPS is a resonant silicon pressure sensor technology platform that provides an order of magnitude greater accuracy and stability than current pressure measurement technologies available. The new TERPS technology also extends the pressure range capability to high pressures and, by incorporating true pressure media isolation, greatly improves its suitability for use in harsh environments.

In addition to providing the performance and packaging improvements available with TERPS, the RPS/DPS 8000 product line takes advantage of best practices to offer a wide range of pressure and electrical connections to enable a level of customization for your specific requirements never before available in the performance class of this sensor.

The combination of the power of the TERPS technology and the quality, reliability and flexibility of the RPS/DPS 8000 Series offers a truly unique solution for high accuracy and high stability pressure measurement requirements.

Specifications

Measurement

Base Pressure Ranges

- 0 to 2 bar (0 to 30 psi) absolute
- 0 to 7 bar (0 to 100 psi) absolute
- 0 to 14 bar (0 to 200 psi) absolute
- 0 to 20 bar (0 to 300 psi) absolute
- 0 to 35 bar (0 to 500 psi) absolute
- 0 to 70 bar (0 to 1000 psi) absolute

Note: Values in psi are approximate.

The base range selected is the next range up from the requested calibrated range. Units are converted to bar for selection; e.g., 30 psi = 2.07 bar. A 7 bar base pressure range will be selected.

Calibrated Ranges

Any zero-based range between 1 and 70 bar (14.5 to 1000 psi) can be specified. (Performance will be of the full scale of the base pressure range selected.) Barometric ranges are available in the RPS/DPS 8100 series. The lowest calibrated pressure is 35 mbar absolute.

Overpressure

1.5X FS

Sensor Failure Pressure

2.0X FS

Pressure Containment

- Ranges to 7 bar (100 psi), 70 bar (1,000 psi)
- Ranges to 70 bar (1,000 psi), 200 bar (3,000 psi)

RS232/RS485/CAN Bus/USB: Accurate to specification within 10 min of power-up

Electrical Protection

RS232/485/CAN Bus/TTL: Connecting V_{supply} and GND between any combinations of pins on the connector will not damage the unit

Insulation

500 V DC

Performance

There are two levels of performance specification: standard and Improved

Specifications include combined effects of non-linearity, hysteresis, repeatability and temperature errors over the compensated temperature range, and over the base pressure range of 35 mbar to the full scale pressure.

Accuracy Code	Precision
A1- Standard	0.02% FS
A2- Improved	0.01% FS

- For Frequency & Diode output, the above accuracies are achievable by using a polynomial curve fit algorithm and coefficient data supplied with sensor.
- Sensors are calibrated against standards traceable to UKAS operating to better than 100 ppm.

Compensated Temperature Ranges:

There are four compensated temperature ranges available:

-10 to +50°C
-40 to +85°C
-40 to +125°C (TTL and CAN bus only)
-55 to 125°C (TTL and CAN bus only)

Temperature Effects

All temperature effects are included in the accuracy statement.

Long Term Stability

Standard: ±0.02% FS/annum

Improved: ±0.01% FS/annum

Note: Unless otherwise specified, specifications are at the reference conditions of 25°C (77°F) ±5°C (±9°F) and 1 bar (14 psi).

Orientation (g) Sensitivity

Less than 0.2 mbar/g
